ANIRUDH RAGHAVAN

West Lafayette, IN, USA |+1 (765) 412-2310| anirudhraghavan2002@gmail.com | LinkedIn | Portfolio | GitHub

Autonomy graduate student seeking internship or co-op opportunities to apply and grow skills in autonomy, computer vision, and AI. Experienced in building real-time perception systems and deep learning pipelines for autonomous platforms. Demonstrated success in developing resilient AI systems optimized for complex, real-world scenarios. Eager to apply and expand these skills in impactful, hands-on engineering roles.

EDUCATION

Purdue University, *West Lafayette, IN, USA* - *MSE in Autonomy* (Candidate 2026) **(GPA: 3.72 / 4)** 2024 – Present

- **Coursework:** Vehicular Cyber-Physical Systems, Embedded Systems, Autonomous Systems, Artificial Intelligence

Vellore Institute of Technology, *Chennai, India* - *B. Tech- Electronics and Communication Engineering* **(GPA: 8.11 / 10)** 2020 – 2024

- **Coursework:** Robotics and Automation, Machine Learning Fundamentals, Control Systems

SKILLS

- **Technical Areas:** Computer Vision, IoT, Embedded Systems, Control Systems, Perception, Real-Time Processing
- **Languages, Tools & Frameworks:** Python, C++, ROS2, Gazebo, Arduino IDE, OpenCV, YOLO, TensorFlow, PyTorch
- **Hardware:** Arduino UNO/Nano, ESP8266, ESP32, STM32, NVIDIA Jetson Nano
- **Certification:** Python for Everybody, IBM AI Engineering Specialization, Modern Robotics Course 1: Foundations of Robot Model

EXPERIENCE

Internet of Things, Externship *(Remote) — SmartInternz*, Hyderabad, India May 2023 – Jul 2023

- Designed and deployed WePark, a smart parking system leveraging ESP32 and IBM Cloud to enable real-time slot tracking and user reservation across mobile platforms.
- Achieved 98% slot detection accuracy, reducing false availability reports by 85% through calibrated sensor integration.
- Implemented cloud-based backend using Firebase and Node-RED, supporting concurrent users with near-zero latency. | GitHub

Student Barista (Part-time) – *Aramark at Purdue University – Starbucks* – West Lafayette, IN, USA Feb 2025 – Present

- Effectively balancing part-time barista duties with full-time academics, demonstrating reliability, strong communication, attention to detail, and professionalism in a fast-paced, customer facing environment while building time management skills.

PUBLICATION

ACADEMIC PROJECTS

Exploring Object Detection and Semantic Segmentation on Road Scene Dataset | GitHub Jan 2025 – May 2025

- Trained and benchmarked YOLOv8 and U-Net architectures using a custom dataset derived from Waymo Open Dataset.
- Created an extensible pipeline for multi-task vision benchmarking, achieved 79% IoU on segmentation and 65% mAP on detection

Weather-Invariant Object Detection: Enhancing YOLOv8 with Environment Adaptive Preprocessing for Robust Performance Across Diverse Conditions | GitHub Aug 2024 – Dec 2024

- Developed a modular, scalable pipeline seamlessly integrating weather classification, adaptive image enhancement, and YOLOv8 for robust real-time object detection in adverse weather conditions.
- Achieved 93% mAP across synthetic fog, rain, and low-light datasets; reduced false negatives by 27% using targeted augmentations

Traffic Sign Recognition Using Deep Learning and Tkinter | GitHub Jun 2025 – July 2025

- Built a high-accuracy traffic sign recognition system using Convolutional Neural Networks (CNNs) trained on the GTSRB dataset in TensorFlow and achieved 99.2% accuracy on test set.
- Deployed the model using a custom Tkinter GUI to enable real-time image classification for potential in-vehicle applications.
